

Prepress Tips:

Don't set up a trifold with 3 equal panel. The most common folding piece is the 11" x 8-1.2" trifold brochure. Brochures designed with the dimensions below fold well and the equal sized outside panels provide a clean look.

Bleeds are absolutely necessary. When any graphic element, image, band of color or rule runs to the trim edge of a sheet, it must extend beyond the edge of the page boundary at least 1/8". This extension, called a bleed, is the only way to ensure an accurate and consistent trim.
